

TCA opts for ITS security systems

Port automation and control systems specialist International Terminal Solutions (ITS) has announced a slew of new orders in the wake of a drive to double the capacity of its business and provide a wider range of services.

One of its most high profile orders has been a system to help Terminal de Contenedores de Algeciras, the multi-user terminal on the Isla Verde, Algeciras, Spain, to maintain its cargo and site security. The system includes an ITS radio data network to give yard operators an automated link to management systems, a GPS equipment tracking and container position determination, and machine readable ID cards for operators.

Other recent activities for ITS include an agreement with APMT to supply a new LoadView system to the Rotterdam straddle carrier terminal, and the piloting of a new ITS RFID track and trace system with a courier company.

ITS will exhibit at TOC2006 Europe on **Stand F26**.
